Subject: Confidential - 980 Hurricane Road Proposed Sampling Locations

Attachments: Former Amphenol Facility - Proposed Indoor Air Sampling Location.pdf

Carolyn

Good afternoon. Please see attached a draft map of the existing facility located at 980 Hurricane Road, Franklin, IN (Former Amphenol Facility). Per our previous discussions, we have identified the anticipated indoor air sampling locations. The samples will be collected using 8-Hour Flow Control Regulators (since it is a non-residential structure) and the sampling event is scheduled to be completed on Tuesday, December 4.

As you can see, we will collect indoor air samples from the two warehouse bathrooms currently in use and from the two office bathrooms currently in use. Additionally, we will collect samples from the two areas in the offices which are most occupied by office personnel. We will also obtain 1 duplicate sample for QA/QC purposes. No indoor air samples will be obtained from bathrooms not currently in use.

We will also collect up to two outside ambient air samples, one between the building and the remediation system and one in the up-wind direction (if it is different from the first location between the building and onsite remediation system).

The samples will be collected in the same manner presented in the Priority Residence Work Plan, with the exception of the use of 8-hour Flow Control Regulators as opposed to 24-hour Flow Control Regulators. Additionally, no sub-slab points will be installed (per our previous discussion/agreement).

Please let us know if you have any questions, comments, or concerns.

Sincerely,

Bradley E. Gentry, LPG Vice President/Brownfield Coordinator IWM Consulting Group, LLC 7428 Rockville Road Indianapolis, IN 46214 Mobile: (317) 435-8877
